

Selecting and Supporting Your Suite of Telehealth Technology Solutions

SUMMARY

Telehealth technology must be secure, reliable, and easy to use for patients, clinicians, and staff alike. This engagement will enable you to confidently select, invest in and support the telehealth technologies that best meet your organization's current and future telehealth needs. Given the need for integration with existing IT systems and the variety of telehealth use cases (visits/exams, ad hoc/ prescheduled, smartphones/smart carts), every organization needs a **Telehealth Technology Strategy** and an effective approach to select best-suited solution vendors. Your custom Telehealth Technology Strategy will reduce redundant technologies and optimize technical and operational support through a limited selection of technology solutions.

PROCESS

We will work with your technical, clinical, operational, and administrative leadership to develop your Telehealth Technology...

- ... Standard (Hardware, Software, Infrastructure, Services)
- ... Support Structure and Processes
- ... Vendor Selection Principles
